

Pitch controller

One-dimensional touch strip:
left-to-right touch position controls pitch over an octave
touch size controls amplitude / muting of sounding notes
buttons transpose range of touch strip

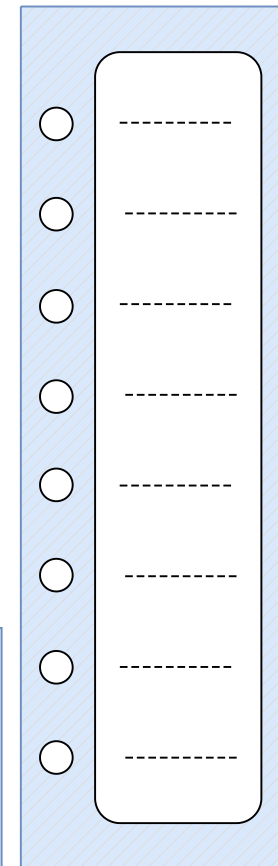

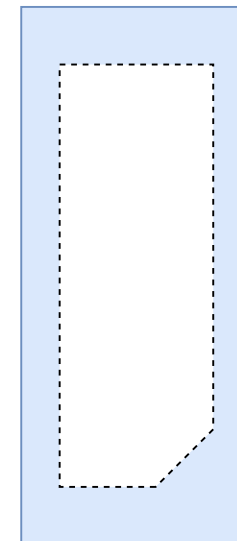

Foot pedal

On a real pedal steel guitar, the footpedals actuate mechanical linkages that temporarily raise the pitch of some strings. These momentary footswitches emulate this behaviour.

Pluck controller

One-dimensional multitouch strip:
Touch position is binned into eight 'strings' -
touch in any of these zones triggers a MIDI
note on event.
Each string transmits on an exclusive MIDI
channel.

Swell pedal

Standard swell pedal controls Volume
parameter for all MIDI channels
